

Naming 2D shapes

Circle
0 straight sides

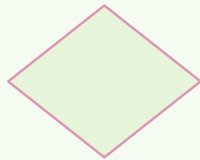

Triangle
3 sides

Square
4 sides

Rectangle
4 sides

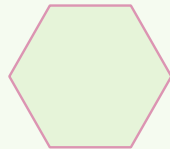

Rhombus
4 sides

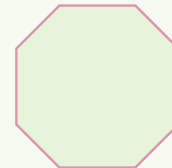

Trapezoid
4 sides

Pentagon
5 sides

Hexagon
6 sides

Octagon
8 sides

Count the straight sides — that is the name. A corner sits at every side, so a hexagon has six of each.
The circle is the odd one out: no straight sides and no corners.
