WORKED EXAMPLE

$$y = 5x + 37 \quad m = \underline{5}$$

## 1. Finding the slope

Write the slope of each line.

1  $y = 10x + 28 \quad m = \underline{\hspace{1cm}}$

3  $y = 8x + 22 \quad m = \underline{\hspace{1cm}}$

5  $y = -6x - 17 \quad m = \underline{\hspace{1cm}}$

7  $y = x + 5 \quad m = \underline{\hspace{1cm}}$

9  $y = -2x - 2 \quad m = \underline{\hspace{1cm}}$

11  $y = 10x + 38 \quad m = \underline{\hspace{1cm}}$

13  $y = -4x - 23 \quad m = \underline{\hspace{1cm}}$

15  $y = 6x - 7 \quad m = \underline{\hspace{1cm}}$

17  $y = x - 22 \quad m = \underline{\hspace{1cm}}$

19  $y = -11x - 19 \quad m = \underline{\hspace{1cm}}$

21  $y = 11x + 25 \quad m = \underline{\hspace{1cm}}$

23  $y = 4x - 22 \quad m = \underline{\hspace{1cm}}$

2  $y = 12x + 1 \quad m = \underline{\hspace{1cm}}$

4  $y = -4x - 25 \quad m = \underline{\hspace{1cm}}$

6  $y = 8x - 28 \quad m = \underline{\hspace{1cm}}$

8  $y = -10x - 20 \quad m = \underline{\hspace{1cm}}$

10  $y = x + 26 \quad m = \underline{\hspace{1cm}}$

12  $y = -12x - 24 \quad m = \underline{\hspace{1cm}}$

14  $y = -6x - 24 \quad m = \underline{\hspace{1cm}}$

16  $y = -21 \quad m = \underline{\hspace{1cm}}$

18  $y = 6x + 37 \quad m = \underline{\hspace{1cm}}$

20  $y = -6x - 29 \quad m = \underline{\hspace{1cm}}$

22  $y = x + 10 \quad m = \underline{\hspace{1cm}}$

24  $y = 11x + 24 \quad m = \underline{\hspace{1cm}}$

## 2. Finding the y-intercept

Write the y-intercept of each line.

25  $y = -11x - 17 \quad b = \underline{\hspace{1cm}}$

27  $y = -2x - 26 \quad b = \underline{\hspace{1cm}}$

29  $y = -6x - 22 \quad b = \underline{\hspace{1cm}}$

31  $y = 3x - 25 \quad b = \underline{\hspace{1cm}}$

33  $y = 6x + 40 \quad b = \underline{\hspace{1cm}}$

35  $y = -9x - 21 \quad b = \underline{\hspace{1cm}}$

37  $y = -x - 4 \quad b = \underline{\hspace{1cm}}$

39  $y = -11x + 17 \quad b = \underline{\hspace{1cm}}$

41  $y = 11x + 19 \quad b = \underline{\hspace{1cm}}$

43  $y = -6x + 36 \quad b = \underline{\hspace{1cm}}$

45  $y = 6x + 2 \quad b = \underline{\hspace{1cm}}$

47  $y = 3x - 15 \quad b = \underline{\hspace{1cm}}$

26  $y = -6x - 24 \quad b = \underline{\hspace{1cm}}$

28  $y = -10x - 27 \quad b = \underline{\hspace{1cm}}$

30  $y = 5x - 26 \quad b = \underline{\hspace{1cm}}$

32  $y = 9x - 9 \quad b = \underline{\hspace{1cm}}$

34  $y = 3x - 23 \quad b = \underline{\hspace{1cm}}$

36  $y = 5x + 3 \quad b = \underline{\hspace{1cm}}$

38  $y = -7x + 38 \quad b = \underline{\hspace{1cm}}$

40  $y = -5x - 18 \quad b = \underline{\hspace{1cm}}$

42  $y = 11x + 33 \quad b = \underline{\hspace{1cm}}$

44  $y = -7x - 12 \quad b = \underline{\hspace{1cm}}$

46  $y = 12x - 14 \quad b = \underline{\hspace{1cm}}$

48  $y = -4x + 33 \quad b = \underline{\hspace{1cm}}$

### 3. Solving equations

Solve each equation for x.

49  $4x + 37 = 10x + 13$           

50  $8x + 10 = 6x + 12$           

51  $12x + 2 = 6x + 32$           

52  $7x + 16 = 9x + 12$           

53  $5x + 12 = 3x + 18$           

54  $4x + 40 = 9x + 15$           

55  $4x + 7 = 6x + 5$           

56  $5x + 8 = x + 16$           

57  $11x + 13 = 9x + 31$           

58  $3x + 20 = 8x + 5$

# Rate of Change

## WORKED EXAMPLE

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 5  | 6  | 7  | 8  |
| $y$ | 29 | 24 | 19 | 14 |

rate  $\rightarrow$  -5

$y$  step = -5,  $x$  step = 1

$-5 \div 1 = -5$

rate of change = -5

## 4. Rate of change from a table

Each table is a straight line. Find what each one asks for.

1

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 2  | 3  | 4  |
| $y$ | 42 | 33 | 24 | 15 |

rate  $\rightarrow$  \_\_\_\_

2

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 4  | 7  | 10 |
| $y$ | 33 | 48 | 63 | 78 |

rate  $\rightarrow$  \_\_\_\_

3

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 3  | 4  | 5  | 6  |
| $y$ | 35 | 32 | 29 | 26 |

rate  $\rightarrow$  \_\_\_\_

4

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 2  | 3  | 4  | 5  |
| $y$ | 51 | 57 | 63 | 69 |

rate  $\rightarrow$  \_\_\_\_

5

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 7  | 11 | 15 | 19 |
| $y$ | 39 | 47 | 55 | 63 |

rate  $\rightarrow$  \_\_\_\_

6

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 6  | 7  | 8  | 9  |
| $y$ | 55 | 47 | 39 | 31 |

rate  $\rightarrow$  \_\_\_\_

7

|     |    |    |   |   |
|-----|----|----|---|---|
| $x$ | 3  | 4  | 5 | 6 |
| $y$ | 18 | 12 | 6 | 0 |

rate  $\rightarrow$  \_\_\_\_

8

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 9  | 13 | 17 | 21 |
| $y$ | 37 | 41 | 45 | 49 |

rate  $\rightarrow$  \_\_\_\_

#### 4. Rate of change from a table (continued)

Each table is a straight line. Find what each one asks for.

9

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 4  | 5  | 6  | 7  |
| $y$ | 59 | 65 | 71 | 77 |

rate  $\rightarrow$  \_\_\_\_

10

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 9  | 10 | 11 | 12 |
| $y$ | 58 | 52 | 46 | 40 |

rate  $\rightarrow$  \_\_\_\_

11

|     |    |    |     |     |
|-----|----|----|-----|-----|
| $x$ | 6  | 10 | 14  | 18  |
| $y$ | 59 | 83 | 107 | 131 |

rate  $\rightarrow$  \_\_\_\_

12

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 6  | 7  | 8  | 9  |
| $y$ | 61 | 65 | 69 | 73 |

rate  $\rightarrow$  \_\_\_\_

13

|     |    |    |     |     |
|-----|----|----|-----|-----|
| $x$ | 4  | 8  | 12  | 16  |
| $y$ | 49 | 89 | 129 | 169 |

rate  $\rightarrow$  \_\_\_\_

14

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 6  | 7  | 8  | 9  |
| $y$ | 20 | 17 | 14 | 11 |

rate  $\rightarrow$  \_\_\_\_

15

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 2  | 3  | 4  | 5  |
| $y$ | 42 | 44 | 46 | 48 |

rate  $\rightarrow$  \_\_\_\_

16

|     |    |    |     |     |
|-----|----|----|-----|-----|
| $x$ | 2  | 8  | 14  | 20  |
| $y$ | 21 | 81 | 141 | 201 |

rate  $\rightarrow$  \_\_\_\_

17

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 2  | 3  | 4  |
| $y$ | 48 | 56 | 64 | 72 |

rate  $\rightarrow$  \_\_\_\_

18

|     |     |     |    |    |
|-----|-----|-----|----|----|
| $x$ | 2   | 7   | 12 | 17 |
| $y$ | 154 | 109 | 64 | 19 |

rate  $\rightarrow$  \_\_\_\_

19

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 3  | 4  | 5  | 6  |
| $y$ | 46 | 49 | 52 | 55 |

rate  $\rightarrow$  \_\_\_\_

20

|     |    |    |     |     |
|-----|----|----|-----|-----|
| $x$ | 6  | 7  | 8   | 9   |
| $y$ | 86 | 94 | 102 | 110 |

rate  $\rightarrow$  \_\_\_\_

#### 4. Rate of change from a table (continued)

Each table is a straight line. Find what each one asks for.

21 

|     |    |    |    |   |
|-----|----|----|----|---|
| $x$ | 3  | 5  | 7  | 9 |
| $y$ | 50 | 34 | 18 | 2 |

rate  $\rightarrow$  \_\_\_\_

22 

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 8  | 9  | 10 | 11 |
| $y$ | 26 | 23 | 20 | 17 |

rate  $\rightarrow$  \_\_\_\_

23 

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 2  | 7  | 12 | 17 |
| $y$ | 38 | 48 | 58 | 68 |

rate  $\rightarrow$  \_\_\_\_

24 

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 5  | 6  | 7  | 8  |
| $y$ | 47 | 42 | 37 | 32 |

rate  $\rightarrow$  \_\_\_\_

#### 5. Systems of equations

Solve each pair by adding the two equations.

25 
$$\begin{aligned} 11x + 9y &= -4 \\ -8x - 9y &= -29 \end{aligned}$$

26 
$$\begin{aligned} 3x + 6y &= -18 \\ 4x - 6y &= 18 \end{aligned}$$

27 
$$\begin{aligned} -10x + 2y &= 0 \\ 4x - 2y &= -6 \end{aligned}$$

28 
$$\begin{aligned} 7x + 11y &= 42 \\ 6x - 11y &= 36 \end{aligned}$$

29 
$$\begin{aligned} -8x + 6y &= -52 \\ 5x - 6y &= 46 \end{aligned}$$

30 
$$\begin{aligned} -10x + 6y &= -54 \\ -5x - 6y &= 54 \end{aligned}$$

31 
$$\begin{aligned} 8x + 4y &= 32 \\ -3x - 4y &= 8 \end{aligned}$$

32 
$$\begin{aligned} -2x + 6y &= 60 \\ 10x - 6y &= 36 \end{aligned}$$

33 
$$\begin{aligned} 10x + 8y &= 56 \\ 5x - 8y &= 4 \end{aligned}$$

34 
$$\begin{aligned} 6x + 9y &= 36 \\ 4x - 9y &= -36 \end{aligned}$$

# Comparing Rates

## WORKED EXAMPLE

A 72 dollars in 6 weeks

B  $y = 14x$ ,  $y$  dollars and  $x$  weeks

A / **B**

## 6. Which rate is greater?

Which one is greater, A or B? Work out each rate first. Circle one.

- 1 A  $y = 10x$ ,  $y$  meters and  $x$  seconds  
B 39 meters in 3 seconds      A / B
- 2 A 84 km in 7 hours  
B  $y = 6x$ ,  $y$  km and  $x$  hours      A / B
- 3 A 12 km in 2 hours  
B  $y = 13x$ ,  $y$  km and  $x$  hours      A / B
- 4 A  $y = 11x$ ,  $y$  km and  $x$  hours  
B 28 km in 7 hours      A / B
- 5 A  $y = 12x$ ,  $y$  meters and  $x$  seconds  
B 49 meters in 7 seconds      A / B
- 6 A 35 km in 7 hours  
B  $y = 10x$ ,  $y$  km and  $x$  hours      A / B
- 7 A 84 km in 7 hours  
B  $y = 10x$ ,  $y$  km and  $x$  hours      A / B
- 8 A 40 dollars in 5 weeks  
B  $y = 5x$ ,  $y$  dollars and  $x$  weeks      A / B
- 9 A  $y = 2x$ ,  $y$  meters and  $x$  seconds  
B 12 meters in 4 seconds      A / B
- 10 A  $y = 9x$ ,  $y$  km and  $x$  hours  
B 64 km in 8 hours      A / B
- 11 A  $y = 13x$ ,  $y$  meters and  $x$  seconds  
B 49 meters in 7 seconds      A / B
- 12 A  $y = 13x$ ,  $y$  words and  $x$  minutes  
B 66 words in 6 minutes      A / B
- 13 A  $y = 4x$ ,  $y$  km and  $x$  hours  
B 30 km in 3 hours      A / B
- 14 A  $y = 13x$ ,  $y$  pages and  $x$  days  
B 18 pages in 2 days      A / B

## 7. How many solutions?

How many solutions does each equation have? Show how you know.

15  $-19x - 32 = -32 - 19x$

16  $17x - 21 = 17x - 29$

17  $11x - 39 = -39 + 11x$

18  $12x + 49 = x + 18$

19  $-8x - 5 = -8x$

20  $2x - 24 = -7x + 1$

21  $-20x + 25 = -20x + 20$

22  $2x - 6 = 2x - 4$

23  $18x - 54 = -54 + 18x$

24  $x - 33 = 15x - 39$

## Is It Linear?

WORKED EXAMPLE

$y = 13x + 17$

Linear

/ Nonlinear

## 8. Linear or nonlinear

Is each equation linear or nonlinear? Circle one.

1  $y = 11x + 24$  Linear / Nonlinear

3  $y = 61/x$  Linear / Nonlinear

5  $y = 2x^2 + 37$  Linear / Nonlinear

7  $y = 12x + 26$  Linear / Nonlinear

9  $y = 49/x$  Linear / Nonlinear

11  $y = 11x^3 + 32$  Linear / Nonlinear

13  $y = 20$  Linear / Nonlinear

15  $y = 6x^3 + 22$  Linear / Nonlinear

17  $y = 5x^2 + 18$  Linear / Nonlinear

19  $y = 13x - 42$  Linear / Nonlinear

21  $y = x^3 + 31$  Linear / Nonlinear

23  $y = 35/x$  Linear / Nonlinear

2  $y = x^2 + 16$  Linear / Nonlinear

4  $y = 16x + 22$  Linear / Nonlinear

6  $y = 92$  Linear / Nonlinear

8  $y = 2x^2 + 20$  Linear / Nonlinear

10  $y = 7x - 9$  Linear / Nonlinear

12  $y = 20/x$  Linear / Nonlinear

14  $y = 9x + 15$  Linear / Nonlinear

16  $y = 86$  Linear / Nonlinear

18  $y = 95/x$  Linear / Nonlinear

20  $y = 35$  Linear / Nonlinear

22  $y = 24x - 16$  Linear / Nonlinear

24  $y = 3x^2 + 12$  Linear / Nonlinear

## 9. Finding the slope

Write the slope of each line.

25  $y = 10x + 30$   $m = \underline{\hspace{1cm}}$

27  $y = 8x + 22$   $m = \underline{\hspace{1cm}}$

29  $y = -14$   $m = \underline{\hspace{1cm}}$

31  $y = -8x + 35$   $m = \underline{\hspace{1cm}}$

33  $y = 9x + 9$   $m = \underline{\hspace{1cm}}$

35  $y = 9x + 19$   $m = \underline{\hspace{1cm}}$

37  $y = -x + 20$   $m = \underline{\hspace{1cm}}$

39  $y = -12x - 24$   $m = \underline{\hspace{1cm}}$

41  $y = 9x + 23$   $m = \underline{\hspace{1cm}}$

43  $y = -12x + 10$   $m = \underline{\hspace{1cm}}$

26  $y = -6x + 33$   $m = \underline{\hspace{1cm}}$

28  $y = -4x - 25$   $m = \underline{\hspace{1cm}}$

30  $y = 12x + 36$   $m = \underline{\hspace{1cm}}$

32  $y = x - 27$   $m = \underline{\hspace{1cm}}$

34  $y = -2x - 26$   $m = \underline{\hspace{1cm}}$

36  $y = x + 26$   $m = \underline{\hspace{1cm}}$

38  $y = -x + 22$   $m = \underline{\hspace{1cm}}$

40  $y = -12x - 30$   $m = \underline{\hspace{1cm}}$

42  $y = x + 25$   $m = \underline{\hspace{1cm}}$

44  $y = -11x - 27$   $m = \underline{\hspace{1cm}}$

# Is It a Function?

## WORKED EXAMPLE

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 4  | 6  | 15 | 6  |
| $y$ | 58 | 38 | 32 | 49 |

$6 \rightarrow 38$  and  $6 \rightarrow 49$

Not a function

## 10. Is it a function?

Does each table show a function? Show how you know.

1

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 5  | 22 | 2  | 12 |
| $y$ | 17 | 17 | 44 | 35 |

2

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 0  | 11 | 0  | 18 |
| $y$ | 20 | 32 | 60 | 16 |

3

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 14 | 19 | 0  | 7  |
| $y$ | 47 | 23 | 34 | 34 |

4

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 9  | 0  | 9  | 10 |
| $y$ | 58 | 29 | 45 | 35 |

5

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 24 | 6  | 11 |
| $y$ | 59 | 52 | 54 | 59 |

6

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 11 | 16 | 10 | 7  |
| $y$ | 52 | 47 | 10 | 52 |

7

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 6  | 6  | 20 |
| $y$ | 55 | 29 | 17 | 18 |

8

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 11 | 18 | 10 | 17 |
| $y$ | 32 | 5  | 32 | 41 |

9

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 8  | 16 | 24 | 8  |
| $y$ | 22 | 49 | 24 | 17 |

10

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 0  | 9  | 10 | 2  |
| $y$ | 47 | 46 | 16 | 46 |

11

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 9  | 15 | 21 | 13 |
| $y$ | 11 | 45 | 45 | 52 |

## 11. Finding the slope

Write the slope of each line.

15  $y = 12x + 1$   $m = \underline{\hspace{1cm}}$

16  $y = 10x + 36$   $m = \underline{\hspace{1cm}}$

17  $y = 11x - 16$   $m = \underline{\hspace{1cm}}$

18  $y = 6x - 26$   $m = \underline{\hspace{1cm}}$

19  $y = -4x - 20$   $m = \underline{\hspace{1cm}}$

20  $y = 5x - 16$   $m = \underline{\hspace{1cm}}$

21  $y = 12x + 36$   $m = \underline{\hspace{1cm}}$

22  $y = -8x + 35$   $m = \underline{\hspace{1cm}}$

23  $y = x - 27$   $m = \underline{\hspace{1cm}}$

24  $y = -6x - 19$   $m = \underline{\hspace{1cm}}$

# Answer Key (1 of 4)

## Slope

Finding the slope

1.  $y = 10x + 28 \rightarrow m = 10$
2.  $y = 12x + 1 \rightarrow m = 12$
3.  $y = 8x + 22 \rightarrow m = 8$
4.  $y = -4x - 25 \rightarrow m = -4$
5.  $y = -6x - 17 \rightarrow m = -6$
6.  $y = 8x - 28 \rightarrow m = 8$
7.  $y = x + 5 \rightarrow m = 1$
8.  $y = -10x - 20 \rightarrow m = -10$
9.  $y = -2x - 2 \rightarrow m = -2$
10.  $y = x + 26 \rightarrow m = 1$
11.  $y = 10x + 38 \rightarrow m = 10$
12.  $y = -12x - 24 \rightarrow m = -12$
13.  $y = -4x - 23 \rightarrow m = -4$
14.  $y = -6x - 24 \rightarrow m = -6$
15.  $y = 6x - 7 \rightarrow m = 6$
16.  $y = -21 \rightarrow m = 0$
17.  $y = x - 22 \rightarrow m = 1$
18.  $y = 6x + 37 \rightarrow m = 6$
19.  $y = -11x - 19 \rightarrow m = -11$
20.  $y = -6x - 29 \rightarrow m = -6$
21.  $y = 11x + 25 \rightarrow m = 11$
22.  $y = x + 10 \rightarrow m = 1$
23.  $y = 4x - 22 \rightarrow m = 4$
24.  $y = 11x + 24 \rightarrow m = 11$

Finding the y-intercept

25.  $y = -11x - 17 \rightarrow b = -17$
26.  $y = -6x - 24 \rightarrow b = -24$
27.  $y = -2x - 26 \rightarrow b = -26$
28.  $y = -10x - 27 \rightarrow b = -27$
29.  $y = -6x - 22 \rightarrow b = -22$
30.  $y = 5x - 26 \rightarrow b = -26$
31.  $y = 3x - 25 \rightarrow b = -25$
32.  $y = 9x - 9 \rightarrow b = -9$
33.  $y = 6x + 40 \rightarrow b = 40$
34.  $y = 3x - 23 \rightarrow b = -23$
35.  $y = -9x - 21 \rightarrow b = -21$
36.  $y = 5x + 3 \rightarrow b = 3$
37.  $y = -x - 4 \rightarrow b = -4$
38.  $y = -7x + 38 \rightarrow b = 38$
39.  $y = -11x + 17 \rightarrow b = 17$
40.  $y = -5x - 18 \rightarrow b = -18$
41.  $y = 11x + 19 \rightarrow b = 19$
42.  $y = 11x + 33 \rightarrow b = 33$
43.  $y = -6x + 36 \rightarrow b = 36$
44.  $y = -7x - 12 \rightarrow b = -12$
45.  $y = 6x + 2 \rightarrow b = 2$

## Slope (continued)

Finding the y-intercept (continued)

46.  $y = 12x - 14 \rightarrow b = -14$
47.  $y = 3x - 15 \rightarrow b = -15$
48.  $y = -4x + 33 \rightarrow b = 33$

Solving equations

49.  $4x + 37 = 10x + 13 \rightarrow x = 4$
50.  $8x + 10 = 6x + 12 \rightarrow x = 1$
51.  $12x + 2 = 6x + 32 \rightarrow x = 5$
52.  $7x + 16 = 9x + 12 \rightarrow x = 2$
53.  $5x + 12 = 3x + 18 \rightarrow x = 3$
54.  $4x + 40 = 9x + 15 \rightarrow x = 5$
55.  $4x + 7 = 6x + 5 \rightarrow x = 1$
56.  $5x + 8 = x + 16 \rightarrow x = 2$
57.  $11x + 13 = 9x + 31 \rightarrow x = 9$
58.  $3x + 20 = 8x + 5 \rightarrow x = 3$

## Rate of Change

Rate of change from a table

1.  $x: 1, 2, 3, 4$ ;  $y: 42, 33, 24, 15 \rightarrow -9$  (y moves  $-9$  while x moves 1, and  $-9 \div 1 = -9$ )
2.  $x: 1, 4, 7, 10$ ;  $y: 33, 48, 63, 78 \rightarrow 5$  (y moves 15 while x moves 3, and  $15 \div 3 = 5$ )
3.  $x: 3, 4, 5, 6$ ;  $y: 35, 32, 29, 26 \rightarrow -3$  (y moves  $-3$  while x moves 1, and  $-3 \div 1 = -3$ )
4.  $x: 2, 3, 4, 5$ ;  $y: 51, 57, 63, 69 \rightarrow 6$  (y moves 6 while x moves 1, and  $6 \div 1 = 6$ )
5.  $x: 7, 11, 15, 19$ ;  $y: 39, 47, 55, 63 \rightarrow 2$  (y moves 8 while x moves 4, and  $8 \div 4 = 2$ )
6.  $x: 6, 7, 8, 9$ ;  $y: 55, 47, 39, 31 \rightarrow -8$  (y moves  $-8$  while x moves 1, and  $-8 \div 1 = -8$ )
7.  $x: 3, 4, 5, 6$ ;  $y: 18, 12, 6, 0 \rightarrow -6$  (y moves  $-6$  while x moves 1, and  $-6 \div 1 = -6$ )
8.  $x: 9, 13, 17, 21$ ;  $y: 37, 41, 45, 49 \rightarrow 1$  (y moves 4 while x moves 4, and  $4 \div 4 = 1$ )
9.  $x: 4, 5, 6, 7$ ;  $y: 59, 65, 71, 77 \rightarrow 6$  (y moves 6 while x moves 1, and  $6 \div 1 = 6$ )
10.  $x: 9, 10, 11, 12$ ;  $y: 58, 52, 46, 40 \rightarrow -6$  (y moves  $-6$  while x moves 1, and  $-6 \div 1 = -6$ )
11.  $x: 6, 10, 14, 18$ ;  $y: 59, 83, 107, 131 \rightarrow 6$  (y moves 24 while x moves 4, and  $24 \div 4 = 6$ )
12.  $x: 6, 7, 8, 9$ ;  $y: 61, 65, 69, 73 \rightarrow 4$  (y moves 4 while x moves 1, and  $4 \div 1 = 4$ )
13.  $x: 4, 8, 12, 16$ ;  $y: 49, 89, 129, 169 \rightarrow 10$  (y moves 40 while x moves 4, and  $40 \div 4 = 10$ )
14.  $x: 6, 7, 8, 9$ ;  $y: 20, 17, 14, 11 \rightarrow -3$  (y moves  $-3$  while x moves 1, and  $-3 \div 1 = -3$ )
15.  $x: 2, 3, 4, 5$ ;  $y: 42, 44, 46, 48 \rightarrow 2$  (y moves 2 while x moves 1, and  $2 \div 1 = 2$ )
16.  $x: 2, 8, 14, 20$ ;  $y: 21, 81, 141, 201 \rightarrow 10$  (y moves 60 while x moves 6, and  $60 \div 6 = 10$ )

# Answer Key (2 of 4)

## Rate of Change (continued)

Rate of change from a table (continued)

17.  $x: 1, 2, 3, 4$   $y: 48, 56, 64, 72 \rightarrow 8$  ( $y$  moves 8 while  $x$  moves 1, and  $8 \div 1 = 8$ )
18.  $x: 2, 7, 12, 17$   $y: 154, 109, 64, 19 \rightarrow -9$  ( $y$  moves  $-45$  while  $x$  moves 5, and  $-45 \div 5 = -9$ )
19.  $x: 3, 4, 5, 6$   $y: 46, 49, 52, 55 \rightarrow 3$  ( $y$  moves 3 while  $x$  moves 1, and  $3 \div 1 = 3$ )
20.  $x: 6, 7, 8, 9$   $y: 86, 94, 102, 110 \rightarrow 8$  ( $y$  moves 8 while  $x$  moves 1, and  $8 \div 1 = 8$ )
21.  $x: 3, 5, 7, 9$   $y: 50, 34, 18, 2 \rightarrow -8$  ( $y$  moves  $-16$  while  $x$  moves 2, and  $-16 \div 2 = -8$ )
22.  $x: 8, 9, 10, 11$   $y: 26, 23, 20, 17 \rightarrow -3$  ( $y$  moves  $-3$  while  $x$  moves 1, and  $-3 \div 1 = -3$ )
23.  $x: 2, 7, 12, 17$   $y: 38, 48, 58, 68 \rightarrow 2$  ( $y$  moves 10 while  $x$  moves 5, and  $10 \div 5 = 2$ )
24.  $x: 5, 6, 7, 8$   $y: 47, 42, 37, 32 \rightarrow -5$  ( $y$  moves  $-5$  while  $x$  moves 1, and  $-5 \div 1 = -5$ )

Systems of equations

25.  $11x + 9y = -4, -8x - 9y = -29 \rightarrow (-11, 13)$
26.  $3x + 6y = -18, 4x - 6y = 18 \rightarrow (0, -3)$
27.  $-10x + 2y = 0, 4x - 2y = -6 \rightarrow (1, 5)$
28.  $7x + 11y = 42, 6x - 11y = 36 \rightarrow (6, 0)$
29.  $-8x + 6y = -52, 5x - 6y = 46 \rightarrow (2, -6)$
30.  $-10x + 6y = -54, -5x - 6y = 54 \rightarrow (0, -9)$
31.  $8x + 4y = 32, -3x - 4y = 8 \rightarrow (8, -8)$
32.  $-2x + 6y = 60, 10x - 6y = 36 \rightarrow (12, 14)$
33.  $10x + 8y = 56, 5x - 8y = 4 \rightarrow (4, 2)$
34.  $6x + 9y = 36, 4x - 9y = -36 \rightarrow (0, 4)$

## Comparing Rates

Which rate is greater?

1.  $A y = 10x$ ,  $y$  meters and  $x$  seconds  $B 39$  meters in 3 seconds  $\rightarrow B$  ( $A$  is 10 and  $B$  is 13 per second)
2.  $A 84$  km in 7 hours  $B y = 6x$ ,  $y$  km and  $x$  hours  $\rightarrow A$  ( $A$  is 12 and  $B$  is 6 per hour)
3.  $A 12$  km in 2 hours  $B y = 13x$ ,  $y$  km and  $x$  hours  $\rightarrow B$  ( $A$  is 6 and  $B$  is 13 per hour)
4.  $A y = 11x$ ,  $y$  km and  $x$  hours  $B 28$  km in 7 hours  $\rightarrow A$  ( $A$  is 11 and  $B$  is 4 per hour)
5.  $A y = 12x$ ,  $y$  meters and  $x$  seconds  $B 49$  meters in 7 seconds  $\rightarrow A$  ( $A$  is 12 and  $B$  is 7 per second)
6.  $A 35$  km in 7 hours  $B y = 10x$ ,  $y$  km and  $x$  hours  $\rightarrow B$  ( $A$  is 5 and  $B$  is 10 per hour)
7.  $A 84$  km in 7 hours  $B y = 10x$ ,  $y$  km and  $x$  hours  $\rightarrow A$  ( $A$  is 12 and  $B$  is 10 per hour)
8.  $A 40$  dollars in 5 weeks  $B y = 5x$ ,  $y$  dollars and  $x$  weeks  $\rightarrow A$  ( $A$  is 8 and  $B$  is 5 per week)
9.  $A y = 2x$ ,  $y$  meters and  $x$  seconds  $B 12$  meters in 4 seconds  $\rightarrow B$  ( $A$  is 2 and  $B$  is 3 per second)

## Comparing Rates (continued)

Which rate is greater? (continued)

10.  $A y = 9x$ ,  $y$  km and  $x$  hours  $B 64$  km in 8 hours  $\rightarrow A$  ( $A$  is 9 and  $B$  is 8 per hour)
11.  $A y = 13x$ ,  $y$  meters and  $x$  seconds  $B 49$  meters in 7 seconds  $\rightarrow A$  ( $A$  is 13 and  $B$  is 7 per second)
12.  $A y = 13x$ ,  $y$  words and  $x$  minutes  $B 66$  words in 6 minutes  $\rightarrow A$  ( $A$  is 13 and  $B$  is 11 per minute)
13.  $A y = 4x$ ,  $y$  km and  $x$  hours  $B 30$  km in 3 hours  $\rightarrow B$  ( $A$  is 4 and  $B$  is 10 per hour)
14.  $A y = 13x$ ,  $y$  pages and  $x$  days  $B 18$  pages in 2 days  $\rightarrow A$  ( $A$  is 13 and  $B$  is 9 per day)

How many solutions?

15.  $-19x - 32 = -32 - 19x$ : infinitely many
16.  $17x - 21 = 17x - 29$ : no solution
17.  $11x - 39 = -39 + 11x$ : infinitely many
18.  $12x + 49 = x + 18$ : one solution
19.  $-8x - 5 = -8x$ : no solution
20.  $2x - 24 = -7x + 1$ : one solution
21.  $-20x + 25 = -20x + 20$ : no solution
22.  $2x - 6 = 2x - 4$ : no solution
23.  $18x - 54 = -54 + 18x$ : infinitely many
24.  $x - 33 = 15x - 39$ : one solution

## Is It Linear?

Linear or nonlinear

1.  $y = 11x + 24$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
2.  $y = x^2 + 16$ : Nonlinear —  $x$  is squared, so the steps in  $y$  grow as  $x$  grows
3.  $y = 61/x$ : Nonlinear —  $x$  is underneath, so doubling  $x$  halves  $y$  instead of adding the same amount again
4.  $y = 16x + 22$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
5.  $y = 2x^2 + 37$ : Nonlinear —  $x$  is squared, so the steps in  $y$  grow as  $x$  grows
6.  $y = 92$ : Linear —  $y$  is always 92 whatever  $x$  does — that graph is a flat line, and flat is a slope of zero rather than no slope
7.  $y = 12x + 26$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
8.  $y = 2x^2 + 20$ : Nonlinear —  $x$  is squared, so the steps in  $y$  grow as  $x$  grows
9.  $y = 49/x$ : Nonlinear —  $x$  is underneath, so doubling  $x$  halves  $y$  instead of adding the same amount again
10.  $y = 7x - 9$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
11.  $y = 11x^3 + 32$ : Nonlinear —  $x$  is cubed, so the steps in  $y$  grow as  $x$  grows
12.  $y = 20/x$ : Nonlinear —  $x$  is underneath, so doubling  $x$  halves  $y$  instead of adding the same amount again

# Answer Key (3 of 4)

## Is It Linear? (continued)

### Linear or nonlinear (continued)

13.  $y = 20$ : Linear —  $y$  is always 20 whatever  $x$  does — that graph is a flat line, and flat is a slope of zero rather than no slope
14.  $y = 9x + 15$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
15.  $y = 6x^3 + 22$ : Nonlinear —  $x$  is cubed, so the steps in  $y$  grow as  $x$  grows
16.  $y = 86$ : Linear —  $y$  is always 86 whatever  $x$  does — that graph is a flat line, and flat is a slope of zero rather than no slope
17.  $y = 5x^2 + 18$ : Nonlinear —  $x$  is squared, so the steps in  $y$  grow as  $x$  grows
18.  $y = 95/x$ : Nonlinear —  $x$  is underneath, so doubling  $x$  halves  $y$  instead of adding the same amount again
19.  $y = 13x - 42$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
20.  $y = 35$ : Linear —  $y$  is always 35 whatever  $x$  does — that graph is a flat line, and flat is a slope of zero rather than no slope
21.  $y = x^3 + 31$ : Nonlinear —  $x$  is cubed, so the steps in  $y$  grow as  $x$  grows
22.  $y = 24x - 16$ : Linear —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$
23.  $y = 35/x$ : Nonlinear —  $x$  is underneath, so doubling  $x$  halves  $y$  instead of adding the same amount again
24.  $y = 3x^2 + 12$ : Nonlinear —  $x$  is squared, so the steps in  $y$  grow as  $x$  grows

### Finding the slope

25.  $y = 10x + 30 \rightarrow m = 10$
26.  $y = -6x + 33 \rightarrow m = -6$
27.  $y = 8x + 22 \rightarrow m = 8$
28.  $y = -4x - 25 \rightarrow m = -4$
29.  $y = -14 \rightarrow m = 0$
30.  $y = 12x + 36 \rightarrow m = 12$
31.  $y = -8x + 35 \rightarrow m = -8$
32.  $y = x - 27 \rightarrow m = 1$
33.  $y = 9x + 9 \rightarrow m = 9$
34.  $y = -2x - 26 \rightarrow m = -2$
35.  $y = 9x + 19 \rightarrow m = 9$
36.  $y = x + 26 \rightarrow m = 1$
37.  $y = -x + 20 \rightarrow m = -1$
38.  $y = -x + 22 \rightarrow m = -1$
39.  $y = -12x - 24 \rightarrow m = -12$
40.  $y = -12x - 30 \rightarrow m = -12$
41.  $y = 9x + 23 \rightarrow m = 9$
42.  $y = x + 25 \rightarrow m = 1$
43.  $y = -12x + 10 \rightarrow m = -12$

## Is It Linear? (continued)

### Finding the slope (continued)

44.  $y = -11x - 27 \rightarrow m = -11$

## Is It a Function?

### Is it a function?

1. (5, 17) (22, 17) (2, 44) (12, 35): Yes — every input appears once — 17 turns up twice, but that is an output, and two inputs may land on the same one
2. (0, 20) (11, 32) (0, 60) (18, 16): No — the input 0 goes to 20 and also to 60, and one input may only go to one place
3. (14, 47) (19, 23) (0, 34) (7, 34): Yes — every input appears once — 34 turns up twice, but that is an output, and two inputs may land on the same one
4. (9, 58) (0, 29) (9, 45) (10, 35): No — the input 9 goes to 58 and also to 45, and one input may only go to one place
5. (1, 59) (24, 52) (6, 54) (11, 59): Yes — every input appears once — 59 turns up twice, but that is an output, and two inputs may land on the same one
6. (11, 52) (16, 47) (10, 10) (7, 52): Yes — every input appears once — 52 turns up twice, but that is an output, and two inputs may land on the same one
7. (1, 55) (6, 29) (6, 17) (20, 18): No — the input 6 goes to 29 and also to 17, and one input may only go to one place
8. (11, 32) (18, 5) (10, 32) (17, 41): Yes — every input appears once — 32 turns up twice, but that is an output, and two inputs may land on the same one
9. (8, 22) (16, 49) (24, 24) (8, 17): No — the input 8 goes to 22 and also to 17, and one input may only go to one place
10. (0, 47) (9, 46) (10, 16) (2, 46): Yes — every input appears once — 46 turns up twice, but that is an output, and two inputs may land on the same one
11. (9, 11) (15, 45) (21, 45) (13, 52): Yes — every input appears once — 45 turns up twice, but that is an output, and two inputs may land on the same one
12. (1, 7) (18, 32) (12, 45) (18, 52): No — the input 18 goes to 32 and also to 52, and one input may only go to one place
13. (17, 1) (20, 3) (9, 1) (19, 44): Yes — every input appears once — 1 turns up twice, but that is an output, and two inputs may land on the same one
14. (6, 43) (6, 40) (16, 56) (20, 25): No — the input 6 goes to 43 and also to 40, and one input may only go to one place

### Finding the slope

15.  $y = 12x + 1 \rightarrow m = 12$
16.  $y = 10x + 36 \rightarrow m = 10$
17.  $y = 11x - 16 \rightarrow m = 11$
18.  $y = 6x - 26 \rightarrow m = 6$
19.  $y = -4x - 20 \rightarrow m = -4$
20.  $y = 5x - 16 \rightarrow m = 5$

# Answer Key (4 of 4)

## Is It a Function? (continued)

Finding the slope (continued)

21.  $y = 12x + 36 \rightarrow m = 12$

22.  $y = -8x + 35 \rightarrow m = -8$

23.  $y = x - 27 \rightarrow m = 1$

24.  $y = -6x - 19 \rightarrow m = -6$

# Solutions (1 of 9)

## Slope

Finding the slope

1.  $y = 10x + 28$      $m = \underline{\hspace{1cm}}$

$$y = 10x + 28$$

$$m = 10$$

A line written this way carries two facts: how much  $y$  moves for each step of  $x$ , and where it already is when  $x$  is 0. The slope is the first.

The number multiplying  $x$  is 10, so each step of  $x$  moves  $y$  by 10.

So  $m = 10$ , and the 28 is where it starts rather than how it climbs.

2.  $y = 12x + 1$      $m = \underline{\hspace{1cm}}$

$$y = 12x + 1$$

$$m = 12$$

A line written this way carries two facts: how much  $y$  moves for each step of  $x$ , and where it already is when  $x$  is 0. The slope is the first.

The number multiplying  $x$  is 12, so each step of  $x$  moves  $y$  by 12.

So  $m = 12$ , and the 1 is where it starts rather than how it climbs.

Solving equations

49.  $4x + 37 = 10x + 13$      $\underline{\hspace{1cm}}$

$$4x + 37 = 10x + 13$$

$$53 = 53 \quad \checkmark$$

This one has  $x$  on BOTH sides, so nothing can be undone yet — subtracting 37 would still leave an  $x$  on the right. Collect the  $x$  terms first.

Take  $4x$  off BOTH sides. That clears  $x$  from the left, leaving  $37 = 6x + 13$ . An equals sign does not care which side is which, so write it as  $6x + 13 = 37$ . That is an equation you have already met.

Two things were done to  $x$ : multiplied by 6, then 13 added. Undo them in the REVERSE order — whatever happened last comes off first.

The 13 went on last, so it comes off first — and off BOTH sides, or the two halves stop being equal.  $37 - 13 = 24$ .

That leaves  $6x$ , which means 6 lots of  $x$ . Divide both sides by 6:  $24 \div 6 = 4$ .

Check by putting it back into the ORIGINAL, both sides:  $4(4) + 37 = 53$ , and  $10(4) + 13 = 53$  — both 53, so  $x = 4$ .

## Solutions (2 of 9)

### Slope (continued)

Solving equations (continued)

50.  $8x + 10 = 6x + 12$           

$$8x + 10 = 6x + 12$$

$$18 = 18 \quad \checkmark$$

This one has  $x$  on BOTH sides, so nothing can be undone yet — subtracting 10 would still leave an  $x$  on the right. Collect the  $x$  terms first.

Take  $6x$  off BOTH sides. That clears  $x$  from the right, leaving  $2x + 10 = 12$ . That is an equation you have already met.

Two things were done to  $x$ : multiplied by 2, then 10 added. Undo them in the REVERSE order — whatever happened last comes off first.

The 10 went on last, so it comes off first — and off BOTH sides, or the two halves stop being equal.  $12 - 10 = 2$ .

That leaves  $2x$ , which means 2 lots of  $x$ . Divide both sides by 2:  $2 \div 2 = 1$ .

Check by putting it back into the ORIGINAL, both sides:  $8(1) + 10 = 18$ , and  $6(1) + 12 = 18$  — both 18, so  $x = 1$ .

## Solutions (3 of 9)

### Rate of Change

Rate of change from a table

1.

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 2  | 3  | 4  |
| $y$ | 42 | 33 | 24 | 15 |

rate  $\rightarrow$  \_\_\_\_

rate of change = **-9**

Rate of change means how much  $y$  moves for every ONE  $x$ . So it is a division, and the two things being divided are both differences: how far  $y$  went, over how far  $x$  went.

Take both rows of steps.  $x$  moves 1, 1, 1 — the same each time — and  $y$  moves  $-9$ ,  $-9$ ,  $-9$ . They are steady, so this table really does have one rate rather than a different one in every gap.

Written out, that is one step of each:  $y$  moved  $-9$  while  $x$  moved 1. Those two numbers are the whole of the division below.

Now divide:  $-9 \div 1 = -9$ . Dividing by one changes nothing, which is exactly why it is worth writing down — on a table whose  $x$  steps by more, it will not.

So the rate of change is  $-9$ :  $y$  moves  $-9$  while  $x$  moves 1, and  $-9 \div 1 = -9$ .

## Solutions (4 of 9)

### Rate of Change (continued)

Rate of change from a table (continued)

2.

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 1  | 4  | 7  | 10 |
| $y$ | 33 | 48 | 63 | 78 |

rate  $\rightarrow$  \_\_\_\_

rate of change = 5

Rate of change means how much  $y$  moves for every ONE  $x$ . So it is a division, and the two things being divided are both differences: how far  $y$  went, over how far  $x$  went.

Take both rows of steps.  $x$  moves 3, 3, 3 — the same each time — and  $y$  moves 15, 15, 15. They are steady, so this table really does have one rate rather than a different one in every gap.

Written out, that is one step of each:  $y$  moved 15 while  $x$  moved 3. Those two numbers are the whole of the division below.

Now divide:  $15 \div 3 = 5$ . This is the step that gets skipped — 15 is how far  $y$  went over 3 of them, not over one.

So the rate of change is 5:  $y$  moves 15 while  $x$  moves 3, and  $15 \div 3 = 5$ .

## Solutions (5 of 9)

### Rate of Change (continued)

Systems of equations

25.  $11x + 9y = -4$   
 $-8x - 9y = -29$

$$\begin{array}{rcl} x & = & -11 \\ y & = & 13 \end{array}$$

Two equations, two letters. Neither one can be solved on its own — so the first move, whichever method you use, is to get down to ONE equation with ONE letter in it.

Look at the  $y$  terms:  $9y$  in the first and  $-9y$  in the second. They are opposites, so adding the two equations makes them cancel.

Adding is allowed because both sides of each equation are equal — adding left to left and right to right keeps the balance, the same as adding a number to both sides. That gives  $3x = -33$ .

One letter left.  $-33 \div 3 = -11$ , so  $x = -11$ .

Now put  $x$  back into either equation to get  $y$  — this is the half that gets forgotten. It gives  $y = 13$ , so the solution is  $(-11, 13)$ .

## Solutions (6 of 9)

### Rate of Change (continued)

Systems of equations (continued)

26.  $3x + 6y = -18$   
 $4x - 6y = 18$

$$\begin{array}{rcl} x & = & 0 \\ y & = & -3 \end{array}$$

Two equations, two letters. Neither one can be solved on its own — so the first move, whichever method you use, is to get down to ONE equation with ONE letter in it.

Look at the  $y$  terms:  $6y$  in the first and  $-6y$  in the second. They are opposites, so adding the two equations makes them cancel.

Adding is allowed because both sides of each equation are equal — adding left to left and right to right keeps the balance, the same as adding a number to both sides. That gives  $7x = 0$ .

One letter left.  $0 \div 7 = 0$ , so  $x = 0$ .

Now put  $x$  back into either equation to get  $y$  — this is the half that gets forgotten. It gives  $y = -3$ , so the solution is  $(0, -3)$ .

### Comparing Rates

Which rate is greater?

1. A  $y = 10x$ ,  $y$  meters and  $x$  seconds      A / B  
B 39 meters in 3 seconds

A 10      B 13  
greater:      B

These two are written in different ways, so there is nothing to compare yet — the numbers on the page are not the same kind of number. Turn each one into a rate PER ONE second first, and do not look at which looks bigger until you have.

A: the number in front of  $x$ , which is already a rate per one second: 10. So A is 10 meters per second.

B:  $39 \div 3 = 13$ . So B is 13 meters per second.

Now they can be compared: A is 10 and B is 13 per second, so B is greater.

## Solutions (7 of 9)

### Comparing Rates (continued)

Which rate is greater? (continued)

2. A 84 km in 7 hours

B  $y = 6x$ ,  $y$  km and  $x$  hours

A / B

A 12 B 6

greater: A

These two are written in different ways, so there is nothing to compare yet — the numbers on the page are not the same kind of number. Turn each one into a rate PER ONE hour first, and do not look at which looks bigger until you have.

A:  $84 \div 7 = 12$ . So A is 12 km per hour.

B: the number in front of  $x$ , which is already a rate per one hour: 6. So B is 6 km per hour.

Now they can be compared: A is 12 and B is 6 per hour, so A is greater.

How many solutions?

15.  $-19x - 32 = -32 - 19x$

$-32 = -32$  is true

infinitely many solutions

Do not start by hunting for  $x$ . Ask a smaller question first: what is left when the  $x$  terms are collected on one side?

Both sides have the SAME number of  $x$ , so taking it off both sides removes  $x$  completely. That is not a mistake — it is the answer arriving early.

What is left is  $-32 = -32$ , which is true whatever  $x$  is. So every number works — infinitely many solutions.

16.  $17x - 21 = 17x - 29$

$-21 = -29$  is false

no solution

Do not start by hunting for  $x$ . Ask a smaller question first: what is left when the  $x$  terms are collected on one side?

Both sides have the SAME number of  $x$ , so taking it off both sides removes  $x$  completely. That is not a mistake — it is the answer arriving early.

What is left is  $-21 = -29$ , which is never true, whatever  $x$  is. So there is no solution.

## Solutions (8 of 9)

### Is It Linear?

Linear or nonlinear

1.  $y = 11x + 24$     Linear   /   Nonlinear

Linear or nonlinear?    **Linear**

Linear means the graph is a straight line, and one thing decides it: what is being DONE to  $x$ . Multiplied by a number and added to — that is a line. Anything else is not.

Look at what happens to  $x$ : it is multiplied by a number, and a number is added or taken away. Nothing else is done to it.

That is exactly the  $mx + b$  shape —  $x$  is only multiplied by a number and added to, so equal steps in  $x$  give equal steps in  $y$ . It is a line.

2.  $y = x^2 + 16$     Linear   /   Nonlinear

Linear or nonlinear?

**Nonlinear**

Linear means the graph is a straight line, and one thing decides it: what is being DONE to  $x$ . Multiplied by a number and added to — that is a line. Anything else is not.

Look at what  $x$  is carrying: it is squared. Squaring is not multiplying by a fixed number — going from  $x = 1$  to 2 to 3 gives 1, 4, 9, and those gaps are 3 then 5.

So equal steps in  $x$  do NOT give equal steps in  $y$ :  $x$  is squared, so the steps in  $y$  grow as  $x$  grows. The graph curves, so it is not a line.

## Solutions (9 of 9)

### Is It a Function?

Is it a function?

1.

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 5  | 22 | 2  | 12 |
| $y$ | 17 | 17 | 44 | 35 |

inputs 5, 22, 2, 12 — no repeat

A function

A function has one rule: every input gets exactly ONE output. So there is only one column to check — the inputs, which are the top row of the table.

Pull the inputs out on their own and look at them together: 5, 22, 2, 12. Nothing about the outputs matters yet.

Now the check: every input appears once — 17 turns up twice, but that is an output, and two inputs may land on the same one.

Two different inputs are ALLOWED to land on the same output — the way both 2 and  $-2$  square to 4, or every hour of a flat day has the same temperature. It is the input column that may not repeat, and it is the only one.

Every input has exactly one output, so this relation is a function.

2.

|     |    |    |    |    |
|-----|----|----|----|----|
| $x$ | 0  | 11 | 0  | 18 |
| $y$ | 20 | 32 | 60 | 16 |

$0 \rightarrow 20$  and  $0 \rightarrow 60$

Not a function

A function has one rule: every input gets exactly ONE output. So there is only one column to check — the inputs, which are the top row of the table.

Pull the inputs out on their own and look at them together: 0, 11, 0, 18. Nothing about the outputs matters yet.

0 is in that list twice, and the two pairs it belongs to do not agree: the input 0 goes to 20 and also to 60, and one input may only go to one place.

One input, two different outputs. That is the one thing a function is not allowed to do, so this relation is not a function.
